

CHEMICAL SERVICE MOTORS

Mechanical & Electrical Features: Motors of epoxy-coated, steel frame construction, with cast iron endshields, conduit box and steel epoxy coated fan cover. Chemically inert, non-sparking fan. Finish is a tough, epoxy, yellow enamel. Shafts are phosphatized steel, with recessed neoprene shaft slinger.

All feature one-way condensation drains at both ends, and are internally treated with electrically tough, and chemically resistant, resin base compounds, highly resistant to oils, acids, alkalis and heat to resist "inside-out" corrosion. Corrosion resistant steel hardware with an epoxy overcoat. Stainless steel nameplate. Sealed ball bearings, preloaded, suitable for mounting in any position. Class "F" insulation system, copper windings, and 1.15 service factor. These motors meet IEEE 45 and military specifications CCM-1807, including fungus-proofing conforming to MIL-V-173.

The WASHGUARD® All-Stainless Motors shown on page 31 are also appropriate for many chemical applications. The chart on page 31 details the chemical resistance of both the stainless steel parts and the specially-treated aluminum end bells and conduit box.

NOTE: FOR LARGER CHEMICAL SERVICE MOTORS, USE 150-170 SERIES CAST IRON MOTORS FROM PAGES 11-14 AND CHEMICAL SERVICE/ SEVERE DUTY CONVERSION KITS.
